

Jhon Salya Manumadi

South Denpasar, Indonesia | jhonsalya11@gmail.com | jhonsalya.com

Professional Summary

Detail-oriented Software Quality Assurance with 3+ years of experience in manual and automated testing, API validation, and backend development. Skilled in test strategy, regression testing, and cross-functional collaboration. Focused on delivering product quality through strong analysis and continuous process improvement.

Experience

Team Lead - Backend Maintenance & QA — Timedoor Indonesia | 2023 - Present

Lead two technical teams: Backend Maintenance and QA, managing priorities, resource allocation, and cross-team collaboration. Drive improvements in both code reliability and product quality across development and testing pipelines. Collaborate with stakeholders to align testing and maintenance efforts with business needs. Mentor backend maintenance and QA members, building skills in debugging, testing, and documentation.

QA Team Lead (Founder of QA Function) — Timedoor Indonesia | 2022 - 2023

Initiated the company's QA division by conducting internal research and benchmarking best practices. Designed and implemented QA processes, including test documentation, bug tracking, and workflow integration. Recruited and mentored QA members and interns to build foundational testing capacity. Created templates and documentation that standardized QA across teams.

Backend Developer — Timedoor Indonesia | 2019 - 2022

Developed and maintained backend systems for multiple client projects. Worked on bug fixing, additional features, and improved system performance through query optimization. Reviewed code and supported junior developers in debugging and planning.

Skills

Testing Tools: K6, Playwright, Postman, Cypress, JMeter, Selenium

Programming Languages: PHP, JavaScript, Python, Java

Databases: MySQL, Firebase

Methodologies: Agile/Scrum, Defect Tracking, Regression Testing

Documentation Tools: Notion, Trello, Coda, Apidog

Education

QA Automation Bootcamp — Jakarta Labs | 2022

Coursework: Java Fundamental, QA Automation, Frontend and Backend testing, CI/CD in QA, Load Testing and Bug Reporting.

Bachelor of Information Technology — ITB STIKOM Bali & HELP University | 2014 - 2019

Coursework: Programming, Project Management, Quality Assurance, Systems Analysis.

Achievements

Promoted to lead two separate technical teams (Backend Maintenance and QA) after demonstrating strong ownership, technical depth, and cross-functional leadership. Founded the company's QA function — researched, proposed, and implemented processes, tools, and workflows from scratch. Hired and onboarded the first QA team, including mentoring interns and designing onboarding/training resources. Built reusable QA documentation templates and standards that improved consistency and testing speed across projects. Improved collaboration between QA and development teams, resulting in smoother handoffs and fewer release-stage bugs.
